new from RUSSIA!

Soviet Journal of Quantum Electronics

SOVIET JOURNAL OF QUANTUM ELECTRONICS

The American Institute of Physics has added to its list of 13 major Russian journals that are translated from cover to cover, the journal *KVANTOVAYA ELEKTRONIKA*. New in 1971, this journal is edited by Academician N.G. Basov, who shared the 1964 Nobel Prize in physics for development of the laser with Charles H. Townes and A. Prokhorov.

This bimonthly journal covers experimental and theoretical work on quantum electronics and its applications in science and technology: lasers, interaction of coherent radiation with matter, holography, nonlinear optics, and related topics. The editors say, "We hope to concentrate, to a significant degree, the fundamental publications on quantum electronics in a single publication."

The importance that the Russians attach to this journal is indicated by the fact that they are printing more than twice as many copies as they print of their famous *ZHURNAL EKSPERIMENTAL'NOI I THEORETICHESKOI FIZIKI*, which we publish as *SOVIET PHYSICS–JETP*.

Volume I (July 1971 - June 1972) of *SOVIET JOURNAL OF QUANTUM ELECTRONICS* covers the 1971 issues of *KVANTOVAYA ELEKTRONIKA*.

TRANSLATION JOURNAL SUBSCRIPTION INFORMATION

The issues of ten of the journals translated from the Russian and published by the American Institute of Physics are dated 6 months after the Russian originals, since several months are required for delivery of the Russian issues, translation and printing. These journals are: Soviet Physics – JETP, Soviet Physics – SOLID STATE, Soviet Physics – TECHNICAL PHYSICS, Soviet Physics – ACOUSTICS, Soviet Physics – DOKLADY, Soviet Physics – CRYSTALLOGRAPHY, Soviet Physics – USPEKHI, SOVIET ASTRONOMY – AJ, SOVIET JOURNAL OF NUCLEAR PHYSICS, and Soviet Physics – SEMICONDUCTORS. Subscriptions begin with July and end with June, corresponding to the calendar year for the Russian originals, and are accepted on an annual basis only. Unless specifically instructed to defer the start of the subscription to the following July, any order received up to 30 April will be considered as covering the period from the previous July through the following June and all issues for this period will be sent to the subscriber.

JETP LETTERS and two journals published for the Optical Society of America, OPTICS AND SPECTROSCOPY and SOVIET JOURNAL OF OPTICAL TECHNOLOGY, carry the same dates as the Russian originals. For these three journals, orders may be placed for annual subscriptions starting with either January or July.

Descriptive information about all of these journals is published regularly on the back covers of many of them. Orders and inquiries should be addressed to:

Soviet Journal of Quantum Electronics

SOVIET JOURNAL OF QUANTUM ELECTRONICS

The American Institute of Physics has added to its list of 13 major Russian journals that are translated from cover to cover, the journal *KVANTOVAYA ELEKTRONIKA*. New in 1971, this journal is edited by Academician N.G. Basov, who shared the 1964 Nobel Prize in physics for development of the laser with Charles H. Townes and A. Prokhorov.

This bimonthly journal covers experimental and theoretical work on quantum electronics and its applications in science and technology: lasers, interaction of coherent radiation with matter, holography, nonlinear optics, and related topics. The editors say, "We hope to concentrate, to a significant degree, the fundamental publications on quantum electronics in a single publication."

The importance that the Russians attach to this journal is indicated by the fact that they are printing more than twice as many copies as they print of their famous *ZHURNAL EKSPERIMENTAL'NOI I THEORETICHESKOI FIZIKI*, which we publish as *SOVIET PHYSICS–JETP*.

Volume I (July 1971 – June 1972) of *SOVIET JOURNAL OF QUANTUM ELECTRONICS* covers the 1971 issues of *KVANTOVAYA ELEKTRONIKA*.
